RAM is a woman-owned business that meets the small business size standard under NAICS Codes 517110 and 541712. We have more than 25 years of experience in providing systems and software engineering and technical support services to the U.S. Government and private industry. Our core business areas are information systems and technical engineering services. RAM has been recognized in Women’s Enterprise Magazine’s Top 50 Women-Owned Businesses in Texas.

DTMS is an essential program that facilitates the unit’s ability to plan and manage training. Optimized for use at Brigade and below, DTMS provides the ability to plan, resource and manage unit and individual training at all levels. DTMS ties together collective, individual, mandatory, common task training, and deployment training. DTMS provides commanders with a continuous update of the unit’s training status.

RAM is committed to responsiveness and excellence in performance. Customer Satisfaction is the foundation of our growth.

The Performance Driven Partner

In an effort to provide commanders at all levels a single source common operating picture for soldier training and readiness, DTMS continues to push forward in the development of interfaces with other systems to provide the most current and relevant data on soldiers to enhance unit training status.

DTMS currently interfaces with the Integrated Total Army Personal Database (ITAPdb), Medical Protection System (MEDPROS), Defense Readiness Reporting System/DRRS – Army (DRRS/DRRS-A), Army Knowledge On-Line (AKO), and consolidates all training proponent Automated Systems Approach to Training (ASAT) database collective and individual tasks. The purpose of DTMS interfaces is to make the Army Training Information System a true “System of Systems” rather than the collection of independent systems currently in place today.

DTMS has the capability to interface with the following systems:

• Army Training Tracking and Resourcing System (ATTRS)
• Center for Army Lessons Learned (CALL)
• Army Training Information Architecture / Training Developers and Doctrine Tool (ATIA/TDDT)
• Range Facilities Management Support System (RFMSS)
• Training Ammunition Management Information System-Redesigned (TAMIS-R)
• Army Learning Management System (ALMS)
• Web-Based Total Army Authorization Document System (WEBTAADS)
• ARFORGEN Synchronization Tool (AST)
• Deployment and Reconstitution Tracking System (DARTS)
• Army Status of Resources and Training System (ASORTS)

DTMS is a web-based commercial-off-the-shelf (COTS) relational database application. It provides the ability to plan, resource, and manage unit and individual training at all levels.

DTMS is a “One Stop Shop” for training management that delivers Long Range Calendars, Short Range Calendars, Training Schedules, and Installation Schools Allocations/Management. It provides a variety of tools to program managers, supervisors, human resources administrators and training/event coordinators that enhance the entire training/event management spectrum.

**Return on Investment (ROI) Benefits**

- Coverage of All Types of Training
- Incorporates Training-Related Personnel Management, Equipment Management, and Event Management
- Provides Real Time Status/Reporting
- Utilizes Transferable Data
- Interfaces with Existing Systems to Increase Efficiency and Reduce Costs
- Maximizes Training Efficiency to Achieve Training Cost Savings

**Comments From DTMS Customers**

“The DTMS is a great system that would make it easier to track soldier data, training, etc. We should have been using DTMS a long time ago. It is more user friendly than any other training program.”

“DTMS consolidates all the tools necessary to manage training for commanders. I plan to be a commander, and I love the fact that training management will be simplified to give me more time on other issues.”
What is DTMS?

DTMS is a web-based commercial-off-the-shelf (COTS) relational database application. It provides the ability to plan, resource, and manage unit and individual training at all levels.
